

Executive program - Amsterdam

NextGen Tech Leaders

Executive program for emerging digital and technology leaders

The challenge

Leading with impact in a complex world

Leading technology is increasingly demanding, requiring managers to balance technical capabilities with strategic objectives, reliable operations with continuous innovation, short-term delivery with long-term vision, and cost control with value creation.

The NextGen Tech Leaders executive program from Luiss University and CIO Platform equips emerging digital and tech leaders with the skills, frameworks, and confidence to navigate these challenges, improve job performance, and drive real business impact.

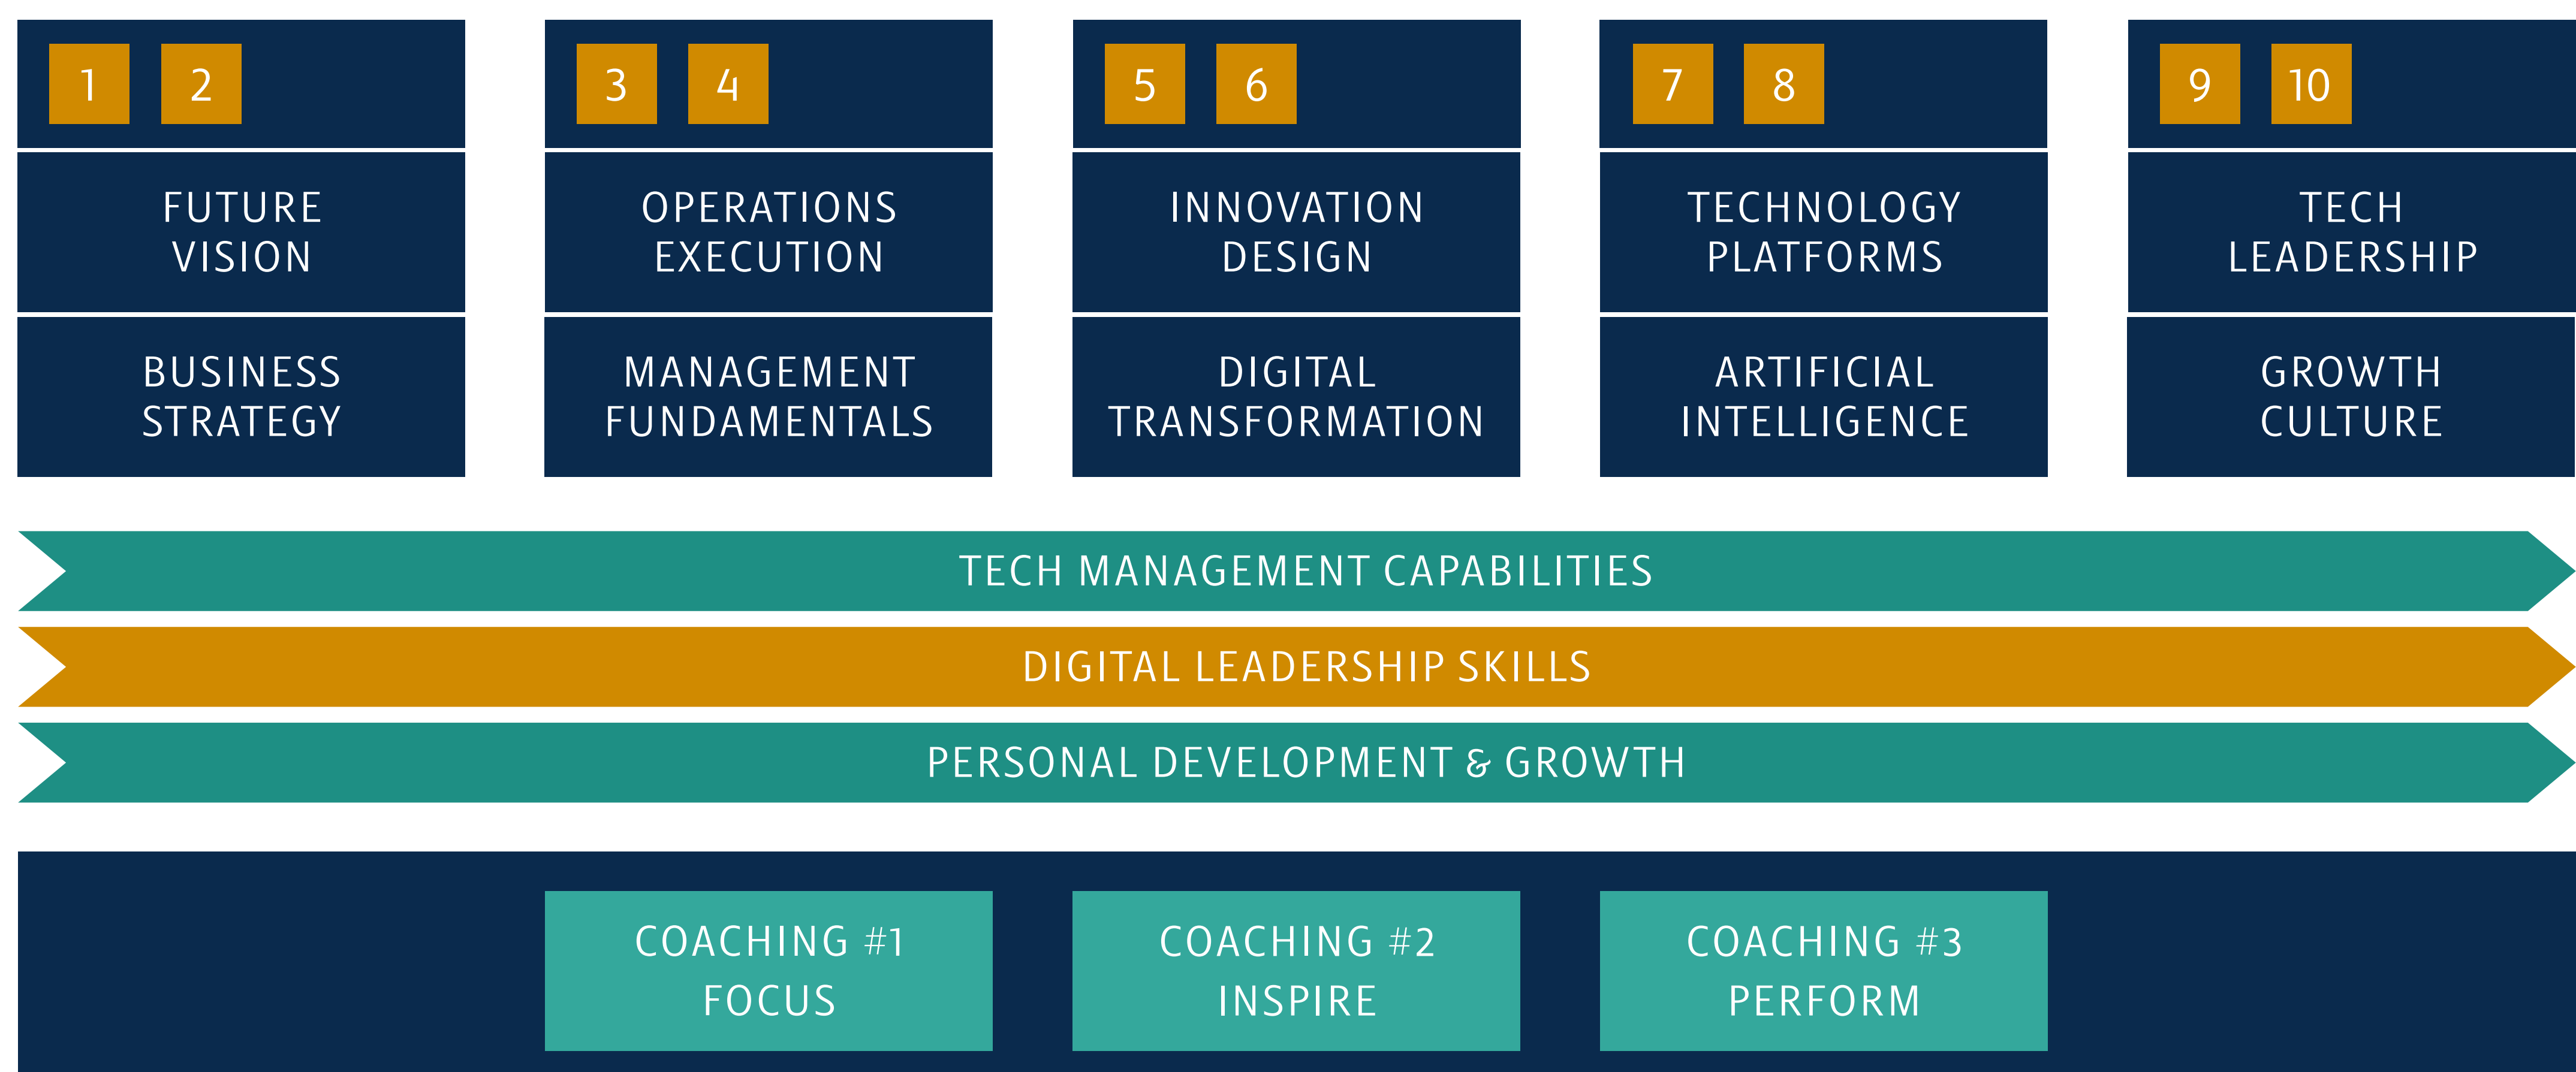

Designed for

Tech managers ready for the next step

The NextGen Tech Leaders program is intended for digital and tech managers and professionals with 5-10 years of experience, such as heads of IT, digital managers, product leads, tech leads, AI and data managers, portfolio managers, enterprise architects.

Upon completion, participants will be able to build effective teams and operating models, align digital products and technical decisions with business strategy, and make trade-offs between operational excellence and AI innovation & transformation.

Curriculum: comprehensive management capabilities

Executive program - Amsterdam

NextGen Tech Leaders

10

modules: delivered in five two-day blocks on thursday and friday

30

lecturers: professors, thought leaders and technology executives

20

participants: max cohort size from diverse industries

3

coaching sessions: individual mentoring in between modules

1

university certificate: will be awarded upon program completion

Individual coaching

Personal and organizational value

As part of the program, participants receive personal coaching & mentoring, tailored to individual needs. These sessions are conducted by senior digital and tech executives, with extensive leadership experience.

The coaching sessions will take place three times, using the participant's responsibilities and goals as the starting point. The objective is to improve job performance and contribution to company results.

Learning experience

Academic rigor meets business practice

The program combines the latest academic insights and business practices through experiential labs, masterclasses, fireside chats and reflection sessions to build capabilities across core tech management.

Collaborative learning is central: sessions explore managerial challenges through class discussions on real cases and peer learning across roles, functions, and industries, driving actionable solutions.

Partnership opportunities

Shaping the next generation of tech leadership together

We invite organisations to partner with the program. Partnerships are flexible and can include sending participants, co-developing the curriculum around your domain expertise, contributing guest lecturers for masterclasses or hosting company visits and hands-on labs. As a partner, you position your organisation at the forefront of tech leadership development and build visibility among top tech talent across industries.

Interested in the program or exploring a partnership? We'd love to hear from you!
